

## INDEX

**B**

Burgers' equation, 282–284

**C**

canonical system, 415

Cauchy problem, 6, 66, 92, 116, 142, 174, 200, 226, 250, 262, 274, 372, 408, 413  
geometric interpretation, 7, 66  
physical interpretation, 6, 7, 141, 142  
procedure of solving, 142, 275

centered rarefaction wave, 276

characteristic, 5

characteristic equation, 5

characteristic system, 26, 66, 92, 141, 173, 199, 225, 249, 250, 273, 407  
for Hamilton–Jacobi equation, 370

Clairaut's equation, 401, 448, 466  
implicit form, 405

complete integral, 367, 409

condition

jump (Rankine–Hugoniot), 279  
stability, 284, 287, 288  
transversality, 372, 414

conoid equation, 8

conservation law, 279, 282, 288

CONVODE, 469–492

via e-mail, 492

cylindrical surface equation, 68

**D**

discontinuous solution, 276

differential equations, *see* equations

**E**

equation, *see also* equations

Burgers', 282–284

characteristic, 5

Clairaut, 401, 448, 466

Clairaut, in implicit form, 405

conoid, 8

cylindrical surface, 68

Hamilton–Jacobi, 370, 372, 414, 417

Hesse, 12, 253

homogeneous functions, 252

Hopf, 275, 282, 290

light rays, 335

Liouville, 442, 460

model, of gas dynamics, 276, 290, 310

Pfaff, 369, 370, 412

Riccati, 437, 439, 458, 459, 471, 475

separable, 336, 337, 339, 361, 365, 401, 402

equations

containing one derivative, 3

linear, 1–258, *see also* linear equations

nonlinear, 317–406, 409–418, 424–468, *see also* nonlinear equations

quasilinear, 261–316, 407–409, 418–424,

*see also* quasilinear equations

solution with CONVODE, 469–492

with arbitrary number of variables, 254–258, 422–424, 454–468

with three variables, 139–248, 418–421, 432–449

with two variables, 5–138, 261–406

Euler transformation, 370, 371, 405

existence and uniqueness theorem, 251, 274, 275, 372, 409, 414

linear equations, 251

nonlinear equations, 372, 414

quasilinear equations, 275, 409

**F**

first order partial differential equations, *see* equations

formulas, Hopf, 284, 417

**G**

general integral, 367, 368, 409, 410

general solution, 5, 115, 141, 173, 174, 199, 200, 225, 249, 250, 273, 407

generalized solution, 281, 284, 287, 289, 375, 416

regular point, 375, 416

singular point, 375, 416

stable, 287, 289

generalized viscosity solution, 374, 416, *see*  
*also* viscosity solution

## H

Hamilton–Jacobi equation, 370, 372, 414, 417  
 characteristic system, 370

Hamiltonian, 370, 415

Hesse’s equation, 12, 253

Hopf’s equation, 275, 282, 290

Hopf’s formulas, 284, 417

## I

initial value problem, 6, 142, 250, 374, 416

integral

characteristic system, 66, 92, 115, 141,  
 173, 199, 225, 249, 250, 261, 273, 369  
 complete, 367, 409  
 general, 367, 368, 409, 410  
 principal, 5  
 singular, 367, 368, 409, 410

integral basis, 141, 249, 250

## J

Jacobi theorem, 415

Jacobi–Mayer bracket, 369, 412

jump condition (Rankine–Hugoniot), 279, 287

## L

Lagrange–Charpit method, 368, 412

Legendre transformation, 370, 405, 413

Lie–Bäcklund group analysis methods, 413

linear differential equations, *see* linear  
 equations

linear equations, 1–258

homogeneous, 5–64, 91–114, 141–172,  
 199–224, 249

nonhomogeneous, 65–90, 115–138,  
 173–198, 225–248, 250

linear equations containing

arbitrary functions, 51–64, 85–90, 109–114,  
 135–138, 167–172, 193–198, 219–224,  
 244–248, 256–258

arbitrary functions of complicated  
 argument, 59, 88, 113

arbitrary functions of different variables,  
 58, 87, 112, 137, 169, 195, 221, 245

arbitrary functions of one variable, 51–57,  
 85, 86, 109–111, 135, 136, 167, 168,  
 193, 194, 219, 220, 244

arbitrary functions of two variables, 89,  
 114, 138, 170, 196, 222, 246

arccosine, 46, 83, 108, 133, 166, 192, 217,  
 242

arccotangent, 49, 84, 109, 134, 167, 193,  
 218, 243

arcsine, 45, 82, 107, 133, 165, 191, 217,  
 242

arctangent, 48, 83, 108, 134, 166, 192, 218,  
 243

cosine, 39, 79, 104, 130, 163, 188, 214,  
 239

cotangent, 42, 80, 106, 131, 164, 190, 215,  
 240

different hyperbolic functions, 33, 77, 102,  
 127, 160, 186, 211, 236

different trigonometric functions, 43, 81,  
 106, 132, 164, 190, 216, 241

exponential functions, 24, 72, 97, 122, 154,  
 180, 206, 231

hyperbolic cosine, 30, 75, 100, 125, 158,  
 183, 209, 234

hyperbolic cotangent, 32, 76, 101, 126,  
 160, 185, 211, 235

hyperbolic functions, 30, 74, 99, 125, 158,  
 182, 208, 233

hyperbolic sine, 30, 74, 99, 125, 158, 182,  
 208, 233

hyperbolic tangent, 31, 76, 100, 126, 159,  
 184, 210, 235

inverse trigonometric functions, 45, 82,  
 107, 133, 165, 191, 217, 242

logarithmic functions, 34, 77, 102, 127,  
 161, 186, 212, 237

power-law functions, 7–23, 68–71, 93–96,  
 117–121, 143–153, 175–179, 201–205,  
 226–230

sine, 37, 79, 104, 129, 162, 187, 213, 238

tangent, 40, 80, 105, 130, 163, 189, 215,  
 240

trigonometric functions, 37, 79, 104, 129,  
 162, 187, 213, 238

linear equations with

arbitrary number of variables, 249–258  
 four and more independent variables,  
 141–248

three independent variables, 141–248

two independent variables, 5–138

linear homogeneous equations, 5–64, 91–114,  
 141–172, 199–224, 249

solution methods, 5, 91, 141, 199, 249

linear nonhomogeneous equations, 65–90,  
 115–138, 173–198, 225–248, 250

solution methods, 65, 115, 173, 225, 250  
 Liouville's equation, 442, 460

## M

method

change of variables, 65, 91, 115, 141, 173,  
 199, 225, 261  
 characteristics, generalized, 376  
 Lagrange–Charpit, 368, 412  
 Lie–Bäcklund group analysis, 413  
 reducing the number of independent  
 variables, 249  
 separation of variables, 410  
 solution using the characteristic system, 66,  
 92, 225, 26  
 vanishing viscosity, 282, 374  
 model equation of gas dynamics, 276, 290,  
 310

## N

nonlinear differential equations, *see* nonlinear  
 equations  
 nonlinear equations, 317–406, 409–418,  
 424–468  
 Cauchy problem, 371, 413  
 general form, 446, 464  
 quadratic in derivatives, 317–366, 424–432,  
 437–442  
 solution methods, 367–370, 409–415  
 theorem existence and uniqueness, 372,  
 414  
 nonlinear equations containing  
 arbitrary functions, 347–368, 392–406,  
 437–449, 457–468  
 arbitrary functions of derivatives, 397–406  
 arbitrary functions of four variables, 406  
 arbitrary functions of independent  
 variables, 347–366, 392–396  
 arbitrary functions of one variable,  
 397–399  
 arbitrary functions of three variables, 404,  
 405  
 arbitrary functions of two variables,  
 400–403, 463  
 arbitrary parameters, 317–346, 385–391,  
 432–436, 454–456  
 arbitrary powers of derivatives, 387,  
 392–394, 434–436  
 derivatives in radicands, 387, 433  
 squares of derivatives, 424, 429, 432  
 nonlinear equations of general form, 446, 464

nonlinear equations quadratic in derivatives,  
 317–366, 424–432, 437–442  
 nonlinear equations with  
 arbitrary number of variables, 409–417,  
 454–468  
 four independent variables, 450  
 power-law nonlinearity in derivatives, 443,  
 456, 462  
 three and more independent variables,  
 409–417, 424–468  
 two independent variables, 317–406

## P

partial differential equations, *see* equations  
 Pfaff equation, 369, 370, 412  
 point  
 regular, 375, 416  
 singular, 375, 416  
 principal integral, 5  
 problem  
 Cauchy 6, 66, 92, 116, 142, 174, 200, 226,  
 250, 262, 274, 372, 408, 413  
 decay of arbitrary discontinuity, 285  
 initial value, 6, 142, 374, 416, *see also*  
 Cauchy problem  
 motion of material point, 425  
 motion of rod, 428  
 motion of two point bodies, 425  
 propagation of signal, 285  
 terminal value, 375, 377, 416, 417  
 two-body, 337  
 procedure of solving Cauchy problem, 142,  
 275

## Q

quasilinear differential equations, *see*  
 quasilinear equations  
 quasilinear equations, 261–316, 407–409,  
 418–424  
 Cauchy problem, 274, 408  
 solution methods, 261, 273  
 theorem, existence and uniqueness, 275,  
 409  
 quasilinear equations containing  
 arbitrary functions, 268–272, 306–316,  
 418–423  
 arbitrary functions of the unknown  
 variable, 310  
 arbitrary functions of two variables, 271,  
 272, 314–316  
 exponential functions, 264, 297

hyperbolic functions, 266, 299  
 logarithmic functions, 267, 302  
 power-law functions, 263, 290–296  
 trigonometric functions, 268, 304  
 quasilinear equations with  
   arbitrary number of variables, 407–409,  
   422–424  
   three and more independent variables,  
   407–409, 418–424  
   two independent variables, 261–316

## R

Rankine–Hugoniot jump condition, 279, 287  
 rarefaction wave, 276, 277, 290, 311  
   centered, 276  
 regular point of generalized solution, 375,  
 416  
 Riccati equation, 437, 439, 458, 459, 471,  
 475  
 rule of equal areas, 280

## S

separable equation, 336, 337, 339, 361, 365,  
 401, 402  
 shock wave, 279, 280, 285, 290, 311  
 singular integral, 367, 368, 409, 410  
 singular point of generalized solution, 375,  
 416  
 solution  
   Cauchy problem, 66, 251, 277, 408  
   discontinuous, 276  
   general, 5, 115, 141, 173, 174, 199, 200,  
   225, 249, 250, 273, 407

generalized, 281, 284, 287, 289, 375, 416  
 generalized, stable, 287, 289  
 generalized viscosity, *see* viscosity solution  
 viscosity, 282, 288, 374–377, 416, 417  
 weak, 281  
 stability condition, 284, 287, 288  
 stable generalized solution, 287, 289

## T

terminal value problem, 375, 377, 416, 417  
 theorem, existence and uniqueness, 251, 274,  
 275, 371, 372, 409, 414  
   linear equations, 251  
   nonlinear equations, 372, 414  
   quasilinear equations, 275, 409  
 theorem, Jacobi, 415  
 transformation  
   Euler, 370, 371, 405  
   Legendre, 370, 405, 413  
 transversality condition, 372, 414  
 two-body problem, 337

## V

viscosity solution, 282, 288, 374–377, 416,  
 417

## W

wave  
   rarefaction, 276, 277, 290, 311  
   rarefaction, centered, 276  
   shock, 279, 280, 285, 290, 311  
 weak solution, 281  
 Whitham's rule of equal areas, 280
