

**9.  $y(x + a) - bxy(x) = 0, \quad a, b > 0.$**

Solution:

$$y(x) = \Theta(x) \int_0^\infty t^{(x/a)-1} e^{-t/(ab)} dt,$$

where  $\Theta(x) = \Theta(x + a)$  is an arbitrary periodic function with period  $a$ .
