

**41.**  $y(x) + g(x)y(\sqrt{a^2 - x^2}) = f(x), \quad 0 \leq x \leq a.$

Solution:

$$y(x) = \frac{f(x) - g(x)f(\sqrt{a^2 - x^2})}{1 - g(x)g(\sqrt{a^2 - x^2})}.$$
