

First-Order Partial Differential Equations > Linear Equations > Section 1.3

4.  $\frac{\partial w}{\partial x} + a \frac{\partial w}{\partial y} = f(x, y)w.$

General solution:

$$w = \exp \left[ \int_{x_0}^x f(t, y - ax + at) dt \right] \Phi(y - ax),$$

where  $\Phi(u)$  is an arbitrary function,  $x_0$  may be taken arbitrary.
