

First-Order Partial Differential Equations > Linear Equations > Section 1.3

$$6. \quad ax \frac{\partial w}{\partial x} + by \frac{\partial w}{\partial y} = f(x)w + g(x).$$

General solution:

$$w = \exp \left[ \frac{1}{a} \int \frac{f(x) dx}{x} \right] \left\{ \Phi \left( x^{-b/a} y \right) + \frac{1}{a} \int \frac{g(x)}{x} \exp \left[ -\frac{1}{a} \int \frac{f(x) dx}{x} \right] dx \right\},$$

where  $\Phi(u)$  is an arbitrary function.
