

$$47. \quad x[f(x^n e^{\alpha y}) + \alpha y g(x^n e^{\alpha y})]y'_x = h(x^n e^{\alpha y}) - ny g(x^n e^{\alpha y}).$$

The substitution $t = x^n e^{\alpha y}$ leads to a linear equation with respect to $y = y(t)$:

$$t[nf(t) + \alpha h(t)]y'_t = -ng(t)y + h(t).$$
