

29. $y''_{xx} - (ae^{2\lambda x} + be^{\lambda x} + c)y = 0.$

The transformation $z = e^{\lambda x}$, $w = z^{-k}y$, where $k = \sqrt{c}/\lambda$, leads to an equation of the form 2.11:
 $\lambda^2 z w''_{zz} + \lambda^2 (2k + 1) w'_z - (az + b)w = 0.$
